

PFAS (Per- and polyfluoroalkyl substances)**Manufacturer Declaration of Conformity**

Per- and polyfluorinated alkyl substances (hereafter abbreviated as PFAS) are a group of extremely persistent chemicals that are used in many consumer products. PFAS are used in products because they can, for example, increase oil and water repellence or withstand high temperatures. There are thousands of different PFAS on the market. As these substances are persistent chemicals, they accumulate in humans and the environment.

Lincoln Binns Ltd (LB Enclosures) hereby declares that we take care not to design-in such substances during development. If the use of PFAS is necessary to fulfil the high-performance criteria, we do declare the use.

Lincoln Binns Ltd (LB Enclosures) does not directly purchase any PFAS, products have been manufactured without the intentional use of such substances. If the use of it cannot be avoided, we do declare it.

Lincoln Binns Ltd (LB Enclosures) has processes and procedures in place to ensure that our suppliers meet our expectations. We communicate our requirements to our suppliers to ensure that PFAS are not used in our products. We subsequently obtain declarations from our suppliers confirming their commitment.

Lincoln Binns Ltd (LB Enclosures) is diligently working to ensure that our supply chain is going to be, or remains free of PFAS.

Please contact us if you have any further questions.
