<sup>&</sup>lt;sup>1</sup>If a material/substance is intentionally added, then it needs to be reported regardless of its content level. If a material/substance is otherwise present then its threshold level applies

<sup>&</sup>lt;sup>2</sup> "Contain" or "Does Not Contain" means that the material is or is not present at or above the threshold noted above. If the material contains the substance, Please provide the amount, and the chemical abstracts service (CAS) number of the substance. When a law exsits that sets a threshold for a material or chemical, the concentration levels (ppm) should be determined based on the methodology set forth in that law. When a law does not exist, concentration levels (ppm) should be determined based on total weight of the product or subpart for which the declaration is being developed
